DETAILED ACTION

Allowable Subject Matter

1. Claims 1-3, 7, 8, 10, 11, 13-17, 20, 21, 23-26 and 28 allowed.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 27 rejected under 35 U.S.C. 103(a) as being unpatentable over Rockwood (4,236,124) in view of Chevalier (5,767,969) further inv view of Kashiwa et al. (5,705,847)

Regarding Claim 27, Rockwood disclose a CO₂ optically pumped distributed feedback diode laser where in Fig. 1, the bottom side of a heterodimensional diode 10 is shone a laser pulse 18 from the laser source 12. Rockwood fails to disclose the required adjustment of frequency of radiation using voltage applied to the heterodimensional diode and depletion width manipulation. However, Chevalier discloses a gyrometric detection method and sampled optical gyrometer to implement said method where in column 3 and in Fig. 4, the required adjustment of the frequency of the radiation using the voltage applied to the diode is disclosed. Furthermore, Kashiwa et al. disclose a semiconductor device where in column 10, the require depletion region width manipulation is disclosed.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required frequency adjustment and the depletion

region width manipulation in Rockwood as taught by Chevalier and Kashiwa et al., respectively, in order to have a semiconductor device with increased voltage performance and increased flexibility.
